

## Bulky Waste (C&D) – Hartford Landfill Capacity

Estimated additional available capacity at Hartford Landfill beyond what is needed for the unburned residues from Mid-CT RRF, and current direct deliveries of bulky waste, through 12/31/2008:

100,000 Cubic Yards

C&D Density: 0.5 Tons/Cubic Yard  
Soil Density: 1.5 Tons/Cubic Yard

Potential C&D Volume = 100,000 CY  
Potential C&D Tonnage = 100,000 CY \* 0.5T/CY = 50,000 Tons

Potential Soil Volume = 100,000 CY  
Potential Soil Tonnage = 100,000 CY \* 1.5 T/CY = 150,000 Tons

Potential C&D Revenue (Assume \$60/Ton):  
50,000 T \* \$60/T = \$3,000,000

Potential Soil Revenue (Assume \$15/Ton):  
150,000 T \* \$15/T = \$2,250,000
