

**LEGAL NOTICE**  
**REQUEST FOR OFFERS TO PURCHASE ELECTRIC OUTPUT**

Over the course of the next two months, the Connecticut Resources Recovery Authority (“CRRA”) will conduct a procurement process for offers from qualified entities for the purchase of the first 250,000 mWh of annual electric production (energy only) generated at CRRA’s Mid-Connecticut Project Electric Generating Facility in Hartford, Connecticut (the “Mid-Connecticut Project”). The Mid-Connecticut Project includes, among other facilities, a waste-to-energy facility generating approximately 60 megawatts from the combustion of municipal solid waste.

CRRA will conduct a two phase procurement process for the sale of the subject energy. The first phase will be a request for qualifications (“RFQ”) to: (1) evaluate the qualifications and financial capability of prospective bidders; and (2) seek comments on a draft power sales agreement (“PSA”). The second phase will be a request for proposals (“RFP”) process to solicit firm price proposals from qualified bidders in accordance with the PSA. CRRA anticipates that the entities selected as prospective bidders will have prior experience as electric market participants.

CRRA is requesting that prospective bidders interested in participating in the RFQ process register with CRRA, to ensure receipt of the procurement documents. To register, please submit a letter to CRRA on your official letterhead (principals only) containing the name(s), mailing address(s), email address (es), and voice and facsimile telephone numbers of the contact person(s) to whom information related to this procurement should be directed. Letters of interest should be mailed to:
